

Distribution Box TAP

Overview

Tap boxes are an enclosed junction box that connects incoming and outgoing cables to a mechanical lug to ensure a strong connection between power sources. These terminal boxes are often used together with load bank testing stations, switch gear connections, as well as generator. Enclosed tap boxes are great product to make splices in an enclosed, secure electrical junction box. These are available in carbon steel or stainless steel upon request. This Square D Meter Centre tap box is 3 phase, 4 wire 347/600VAC 1200A with a 50kA short circuit current rating. Standard connection points are a typical Nema style hole pattern that will allow crimp lugs to be attached or another optional feature is adding mechanical lugs.
