

Huawei Core Network Switch

AI Overview

Huawei Core Network Switches are high-performance, scalable, and resilient switches designed to serve as the backbone of enterprise and data center networks.

Overview

Huawei core switches are mission-critical networking devices engineered to handle massive data traffic, ensure high-speed routing, and maintain network reliability across enterprise, service provider, and data center environments . They are optimized for data-intensive applications, cloud services, and high-density connectivity, making them suitable for modern digital infrastructures .

Key Models and Features

- S12700 Series (TAN Series): Next-generation core switches supporting intelligent, scalable network architectures. They integrate wired, optical, and wireless technologies and leverage CloudFabric architecture for ultra-broadband services, operational efficiency, and agility .
- S9300 ING Series: Designed for medium to large enterprises, offering high-speed switching, intelligent network management, and energy-efficient cooling for stable operation in high-density environments .
- Terra Series SST3200-12K-C: High-performance data center core switch engineered for extreme throughput and low latency, ideal for hyperscale computing and high-capacity data centers .
- S6700 Series: Can function as a core switch on campus networks or as an access switch in data centers, providing up to 48 line-speed 10GE ports, advanced buffering, QoS, and security features .
