

New Data Center PDU

Overview

AI-powered PDUs help predict problems, optimize energy use, and cut operational costs by up to 20%. Advanced pdu technology delivers these benefits through intelligent monitoring, real-time analytics, and remote. Schneider Electric, the leader in the digital transformation of energy management and automation, today announced new data center solutions specifically engineered to meet the intensive demands of next-generation AI cluster architectures. Evolving its EcoStruxure™ Data Center Solutions portfolio. s the critical link between power sources and IT equipment. 2 billion by 2032, up from US\$328. Depending on the type, a PDU may also monitor power consumption, report usage data, and even allow remote control of connected. Power and cooling technology firm Vertiv has launched a new power distribution unit (PDU) targeting AI and HPC workloads. The Vertiv PowerIT rack PDU is an extension of the company's PowerIT range, and apparently provides “advanced power management, flexible configurations, and enhanced internal.
