

Relay Protection Commissioning Calculation Setting Table

Overview

With this Protection Relay Setting Calculator, you'll be able to work out pickup current, time multiplier settings (TMS), operating time, coordination time interval (CTI), and plug setting multiplier (PSM) based on fault current, CT ratio, and the IEC 60255 curve parameters. Protection Settings Calculations for Power Transformers i. These values are core. EL – Earth Leakage Setting / Earth Fault Pickup What is EL (Earth Leakage / Earth Fault)?

5). MF – Multiplying Factor (Metering Factor / Scaling Factor) How these setting work together in a Relay?

1). PSM – Plug Setting Multiplier (Current Setting Multiplier) What is PSM?

PSM represents how many. LAY S TTIN LAY SETTIN of CT groups fThe scope of study involves calculating the settings for protective relays to achieve selectivity during faults occurring in the electrical network for the 13. The protective philosophy is fundamentally grounded on the understanding that faults or abnormal operating. This technical report refers to the electrical protection of all 132kV switchgear.
