

# TP Switch Aggregation Management

## Overview

Equipped with all-fiber ports, Aggregation Series Switches deliver up to 25 Gbps. With features such as Static Routing, DHCP Server, ACL, IGMP Snooping, STP, LAG, and centralized cloud management, they offer a robust and reliable solution for the aggregation layer. LAG is short for link aggregation group, including static LAG and LACP (Link Aggregation Control Protocol) two achievement mechanisms. Select models. With LAG (Link Aggregation Group) function, you can aggregate multiple physical ports into a logical interface, increasing link bandwidth and providing backup ports to enhance the connection reliability. If you build a NAS server in your local network and require a higher LAN speed than 1Gbps, the device. TP-Link's JetStream L2+ managed switches provide high performance, powerful L2 and L2+ features like static routing, enterprise-level QoS, advanced security strategies and a bundle of ISP features. The 10-gigabit ports ensure high-speed data transfer, and their backward compatibility with gigabit.

How to use CPEs to build up a LAG (Link Aggregation)

For example, if CPE-A1 is down, Switch-2 will lose connection to Switch-1, since the logic connection between switch 2 and CPE-A2 is still up and

What Is an Aggregation Switch and How to Choose?

Aggregation switches play a crucial role in network management by consolidating and simplifying traffic from access switches. Positioned between

Aggregation Switch

An aggregation switch refers to a type of switch used to connect multiple ToR switches to a core switch/router in a cloud data center network. It enables high-bandwidth aggregation ports to be

How to configure the Link Aggregation of GPON OLT

Step1. Please go to Control Card Management. Open the Control Card Management, and click the Link-aggregation. You will see there are 16

TP-Link SX3008F Omada Aggregation 8-Port 10GE

TP-Link's JetStream L2+ managed switches provide high performance, powerful L2 and L2+ features like static routing, enterprise-level QoS, advanced security

How to configure LACP on our Smart/ Managed Switch

When exchanging information between systems, the system with higher priority determines which link aggregation a port belongs to, and the system with lower priority adds the

What Is an Aggregation Switch and How to Choose?

An aggregation switch is a network device that consolidates traffic from multiple access switches, wireless access points, or other edge devices and
